About Me

I am a Software Engineer with a systems engineering background who focuses on building reliable and scalable web applications through continuous learning and teamwork. I spent 4 years at PT Biofarma monitored SCADA-controlled production systems and improved troubleshooting and documentation practices to reduce equipment-related downtime. I have experience developing full-stack applications such as SmaFarm using Next.js and NestJS, and I also contributed to a microservices-based payment gateway system integrated with Midtrans at TiketQ. I am skilled in React, Node.js, Docker, Git, and databases such as MySQL, PostgreSQL and MongoDB. I enjoy working closely with team members to turn ideas into tested, deployable features and deliver applications that are scalable, reliable, and provide a strong user experience.

Education

REVOU

Feb, 2025 – Aug, 2025

Full Stack Software Engineering

Completed an intensive Full-Stack Software Engineering bootcamp at RevoU, gaining hands-on experience in front-end and back-end development using HTML, CSS, JavaScript, TypeScript, Next.js, Tailwind CSS, Node.js, NestJS, PostgreSQL, and Prisma ORM, with Git-based collaboration. Developed multiple real-world projects, including a Booking Management System for creating, managing, and tracking bookings.

Final Project: "[Smafarm Platform](#)"

BINUS UNIVERSITY

March, 2022 – Jul, 2024

GPA: 3.83 / 4.00

Bachelor Of Industrial Engineering

"Optimization Analysis Of Vessel Cooling Time To Prevent nOPV2 Vaccine Deviation Using Linear Regression And Factorial DOE At PT Biofarma"

BANDUNG STATE POLYTECHNIC

Aug, 2016 - Aug, 2019

GPA: 3.16 / 4.00

Associate Degree of Electronics Engineering

Final Project: "Tsunami Wave Detection System Based on IoT"

Working Experiences

Backend (Microservice Development), RevoU x TiketQ

Dec, 2025 – Feb, 2026

- Developed a Midtrans integration module to connect with the payment gateway, ensuring fast and reliable responses while reducing payment processing complexity.
- Implemented payment gateway integration logic to handle token requests and redirect URLs, while applying resilience strategies (timeout and retry) to improve system reliability and reduce transaction failures.
- Integrated transaction history functionality using an existing codebase, ensuring efficient and reliable access to transaction data.
- Conducted testing to validate system functionality and ensure accurate and reliable transaction data processing.

Staff Field Engineer, PT Bio Farma

Aug, 2020 – Aug, 2024

- Controlled and monitored pressure vessel tank processes during production, reducing production deviations by 90% by using real-time SCADA monitoring to track key production and cleaning parameters.
- Prepared and compiled production document requirements, increasing compliance by 90% and reducing production deviations by 60% through creating standardized production forms with clear guidelines for operators.
- Reviewed data from disinfection, CIP, sterilization, and production processes to reduce inconsistencies in subsequent production by 90%, by manually analyzing real-time data and collaborating with supervisors to address deviations.
- Troubleshoot initial issues on pressure vessel tanks and SCADA systems, decreasing equipment downtime by 95% by conducting pressure checks and analyzing SCADA data to detect anomalies early.

Project Experiences

Microservice Development, RevoU x TicketQ

Dec, 2025 – Feb, 2026

As a Freelance Backend Developer in a Microservice Development Project (RevoU x TicketQ), I served as a backend developer, focusing on the payment gateway service within a microservices architecture. I defined the Midtrans Port interface for seamless payment gateway integration, establishing strong communication for transaction processing. I created a reliable HTTP Client Helper to streamline external service communication. Additionally, I implemented the Outgoing Midtrans Snap Request for efficient transaction processing and the Transaction History Endpoint for easy access to records, enhancing user engagement. Finally, I conducted thorough testing for Midtrans integration, ensuring the system operated effectively and minimizing potential errors.

Product Requirement Document Implementation, RevoU

Nov, 2025 – Dec, 2025

Implementation Project is a hands-on project focused on developing user-centered web applications based on PRD guidelines. Supervised by RevoU, the project hones collaboration, problem-solving, and analytical skills to deliver scalable, high-quality solutions aligned with business and user needs. As a Back-End Team Lead, I broke down complex back-end tasks into manageable tasks, led the team by assigning duties according to each member's strengths, and initialized the framework using NestJS to expedite onboarding. I also designed a database schema and API, created middleware for rate limiting API requests, and implemented logging middleware for activity monitoring. Additionally, I developed custom exception handling and executed thorough back-end testing to ensure reliability before deployment.

smafarm Platform, RevoU FSSE Program

Jun, 2025 – Aug, 2025

In this role, I designed user-facing pages using Next.js with server-side rendering, achieving an average render time of around 1 second, which significantly improved user experience and search visibility for key pages. Additionally, I developed backend API endpoints with NestJS, implementing modular business logic to enable efficient client-server data flow and facilitate easier maintenance. I also created and managed Supabase database tables and an image storage bucket, utilizing Prisma schemas for structured migrations that reduced schema errors and SQL risks. Finally, I conducted testing on both the frontend and backend using Jest, successfully identifying and resolving bugs to enhance platform stability before deployment.

Skills

Technical: HTML, CSS, TypeScript, JavaScript, Python, NestJs, FastApi, Next.js, React, Tailwind CSS, PostgreSQL, MySQL, MongoDB, Prisma ORM, Supabase, Pyscopg, Redis, Railway, Vercel, Netlify, Docker, Node.js, Git, Postman, Visual Studio Code, SCADA (Supervisory Control and Data Acquisition), PID Tuning, PLC (Programmable Logic Control), Microcontroller Programming (Arduino, ESP32)

Soft Skills: Communication, Team Collaboration, Problem Solving, Time Management, Continuous Learning, Adaptability, Attention to Detail

Languages: Indonesia, English

Certification

1. [Full Stack Software Engineering](#)
Issued by: PT Revolusi Cita Edukasi
Issued date: August, 30 2025
Credential ID: FSSE-2025-09-29822023435
2. [SCADA System Laboratory](#)
Issued by: Electronic Engineering - POLBAN
Issued date: February, 05 2019
Credential ID: -
