About Me

I am a Software Engineer with a systems engineering background who focuses on continuous learning and teamwork to build reliable, user-friendly web applications. At PT Biofarma I monitored SCADA-controlled production systems and improved troubleshooting speed and documentation practices that reduced equipment-related downtime and operational errors. I built full-stack applications like SmaFarm (Next.js and NestJS) and deShopper (Next.js), focusing on frontend performance and SEO. I'm skilled in React, Docker, Git, and databases (MySQL, PostgreSQL, MongoDB). I work closely with team members to turn ideas into tested, deployable features. Through my full-stack training and projects, I build scalable web applications that deliver great user experience and reliability.

Education

RevoU Feb, 2025 – Aug, 2025

Full Stack Software Engineering

Learned full-stack web development, from building websites without frameworks to using Next.js and NestJS. I also gained experience in managing databases with PostgreSQL and Supabase, strengthening my backend and data integration skills.

Final Project: "[Smafarm Platform](#)"

BINUS UNIVERSITY

March, 2022 – Jul, 2024

GPA: 3.83 / 4.00

Bachelor Of Industrial Engineering

"Optimization Analysis Of Vessel Cooling Time To Prevent nOPV2 Vaccine Deviation Using Linear Regression And Factorial DOE At PT Biofarma"

Working Experiences

Staf Field Engineer, PT Bio Farma Aug, 2020 – Aug, 2024

- Controlled and monitored pressure vessel tank processes during production, reducing production deviations by 90% by using real-time SCADA monitoring to track key production and cleaning parameters.
- Prepared and compiled production document requirements, increasing compliance by 90% and reducing production deviations by 60% through creating standardized production forms with clear guidelines for operators.
- Reviewed data from disinfection, CIP, sterilization, and production processes to reduce inconsistencies in subsequent production by 90%, by manually analyzing real-time data and collaborating with supervisors to address deviations.
- Troubleshoot initial issues on pressure vessel tanks and SCADA systems, decreasing equipment downtime by 95% by conducting pressure checks and analyzing SCADA data to detect anomalies early.

Project Experiences

Microservice Development, RevoU x TiketQ December, 2025 – February, 2026

In the Microservice Development virtual internship project supervised by RevoU and TiketQ, I served as a backend developer, contributing to a smart booking dashboard that provides real-time insights into ticket sales, booking trends, and customer behavior. I defined the Midtrans Port interface for seamless payment gateway integration, establishing strong communication for transaction processing. I created a reliable HTTP Client Helper to streamline external service communication. Additionally, I implemented the Outgoing Midtrans Snap Request for efficient transaction processing and the Transaction History Endpoint for easy access to records, enhancing user engagement. Finally, I conducted thorough testing for Midtrans integration, ensuring the system operated effectively and minimizing potential errors.

Product Requirement Document Implementation, RevoU

November, 2025 – December, 2025

Implementation Project is a hands-on project focused on developing user-centered web applications based on PRD guidelines. Supervised by RevoU, the project hones collaboration, problem-solving, and analytical skills to deliver scalable, high-quality solutions aligned with business and user needs. As a Back-End Team Lead, I broke down complex back-end tasks into manageable tasks, led the team by assigning duties according to each member's strengths, and initialized the framework using NestJS to expedite onboarding. I also designed a database schema and API, created middleware for rate limiting API requests, and implemented logging middleware for activity monitoring. Additionally, I developed custom exception handling and executed thorough back-end testing to ensure reliability before deployment.

In this role, I designed user-facing pages using Next.js with server-side rendering, achieving an average render time of around 1 second, which significantly improved user experience and search visibility for key pages. Additionally, I developed back end API endpoints with NestJS, implementing modular business logic to enable efficient client-server data flow and facilitate easier maintenance. I also created and managed Supabase database tables and an image storage bucket, utilizing Prisma schemas for structured migrations that reduced schema errors and SQL risks. Finally, I conducted testing on both the frontend and backend using Jest, successfully identifying and resolving bugs to enhance platform stability before deployment.

Additional Information

Technical:

- **Web Technologies:** HTML, CSS
- **Programming Languages:** TypeScript, JavaScript
- **Back-end Frameworks:** NestJs
- **Frontend Frameworks & Libraries:** Next.js, React
- **Styling / CSS Frameworks:** Tailwind CSS
- **Database Management:** Postgresql, MySQL, MongoDB, Prisma ORM, Supabase
- **Cloud & Deployment:** Railway, Vercel, Netlify, Docker
- **Developer Tools:** Node.Js, Git, Postman
- **Industrial Automation:** SCADA (Supervisory Control and Data Acquisition), PID Tuning, PLC (Programmable Logic Control)
- **Electronics & Embedded Systems:** Microcontroller Programming (Arduino, ESP32)

Soft Skills: Communication, Team Collaboration, Problem Solving, Time Management

Languages: Indonesia, English

Certification: 1. [Full Stack Software Engineering](#), RevoU
2. [SCADA System Laboratory](#), Electronic Engineering - POLBAN
